means for transmitting and receiving electrical signals via the phone line connectors, the electrical signals being transmitted and received between the slave test unit and at least one remote test unit, the electrical signals received from the at least one remote test unit comprising test commands;

means for decoding the test commands from the electrical signals received from the at least one remote test unit, and;

means for executing the test commands, the executing means including the ability to generate test signals;

whereby the test commands executed by the slave test unit are received exclusively from the at least one remote test unit.

Please amend claim 11 as follows:

A2 Sub B2

11. (Amended) A method for testing voice signal quality over phone connections, comprising the steps of:

establishing at least one phone connection, whereby each of the at least one phone connections is made with a separate remote test unit;

receiving electrical signals, the electrical signals being received from the remote test units associated with the at least one phone connections, the electrical signals comprising test commands;

decoding the test commands from the electrical signals being received from the remote test units; and

executing the test commands, the executing step including the ability to generate test signals, the test commands being received exclusively from the remote test units.
